

Note: Follow Bluemix-sushi-prereqs for directions to get IDs. This may take up to 24 hours.

Create a Website using Node.js

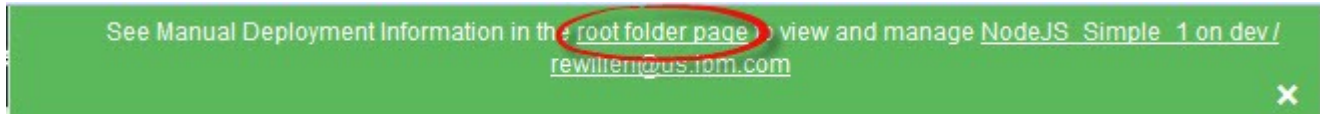

- 1 In your web browser, go to IBM Bluemix™ at <https://ibm.biz/bluemix4kids> and LOG IN.
- 2 On a separate tab in your browser, go to DevOps Services at <https://hub.jazz.net/> and SIGN IN.
- 3 Open the sample project [rewillen | NodeJS_Simple_2](#) in your browser.
- 4 Click on [EDIT CODE](#)

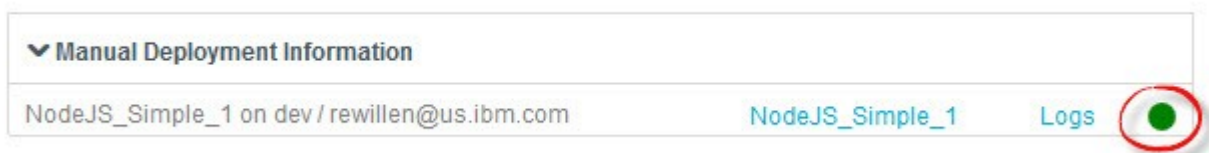

- 5 **DEPLOY** the Application. Wait for the deployment to complete and the green box shown in Step 6 to appear.

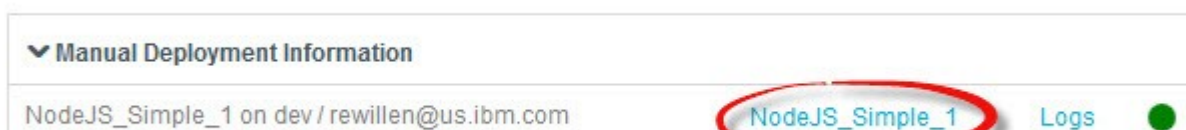

- 6 See the Manual Deployment page by following the root folder page link in the green box message.

- 7 Wait until the Manual Deployment information refreshes on the page, and you see a green success indicator for your deployment.

- 8 Click on the [NodeJS_Simple_1](#) link to view your application.

- 9 A separate browser tab will open with your application.

- 10 Refresh the application in the browser. * What happens? The count should be incremented.
- 11 Return to the Manual Deployment page, click on your deployment, and Stop your application.

- 12 Click on your deployment again, and Start your application in BlueMix.

- 13 Follow the [NodeJS_Simple_2](#) link again to open the application running in a separate tab. * What happens to the count? The count should be reset to 1 visit.
- 14 Share the URL link to your application with your friends. * What happens to the count when your friends hit your link?
- 15 Can you get another application running in Bluemix? Go to DevOps Services EXPLORE and search for other projects. When you open a project, if you see the “DEPLOY” button, the project is already enabled for deployment to Bluemix.
