

Using the code repository

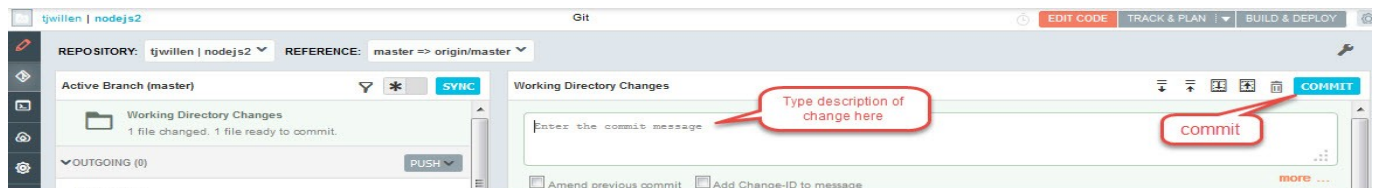

- 1 In your web browser, go to IBM Bluemix™ at <https://ibm.biz/bluemix4kids> and LOG IN.
- 2 On a separate tab in your browser, go to DevOps Services at <https://hub.jazz.net/> and SIGN IN.
- 3 Open your DevOps Services project in your browser.
- 4 Click the git icon on the left column

- 5 The Repository view will open. You will see the files you have changed, and the actual code changes are highlighted. Click the **Select All** box to select the changed files.

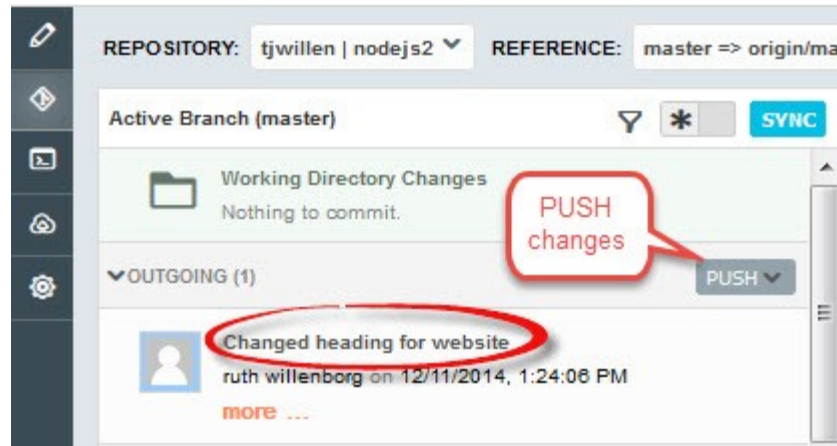

- 6 Type in a description of your changes in the box that says “Enter the commit message”.

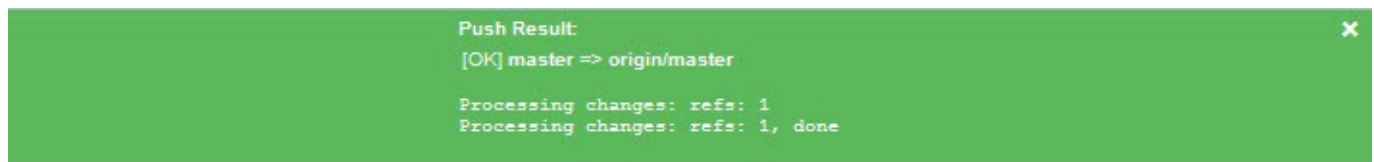

7 Click on the **COMMIT** button on the right. Your changes are now ready to be pushed to the master repository where others will be able to see them.

8 You will see your changes under OUTGOING on the left panel. Click the **PUSH** button.

9 Wait until you see the Push Result green box.

10 You can now use the Automatic Build & Deploy capabilities to deploy your code from the repository. Build & Deploy only uses files in the repository. Click **BUILD & DEPLOY** on the far right.

11 Click **SIMPLE** to turn on the automated Build and Deploy. A build and deploy should automatically happen for any changes pushed to the repository. You can also use the REQUEST DEPLOY button.
